

HOMEOWNER

Our doors have the most advanced finish available.

Electro-statically coated with polyester/epoxy powders, then baked on in a gas fired oven to produce a hardened finish.

This hardened finish will add years of life to your Steel Security Storm Door. To maintain your warranty and keep your door as beautiful as the first day it was installed, follow these maintenance instructions.

* We suggest that 5-7 days after your door has been installed, apply a coat of Armor-All liquid wax.

This seals in the finish on your door and helps keep the luster in your door.

* Every 6 months - Wash your door with a mild dish washing detergent and apply protectant.

With normal use and care, rusting should not be a problem.

If surface rusting should occur, touch-up paint is available. Before applying paint, always be sure to sand the spot down to bare metal, clean the area with Turtle Wax Chrome cleaner, allow to dry, and then apply the touch up paint.
